Experiment number : 18

Aim: Install a C compiler in the virtual machine created using virtual box / VM War Workstation / Player and execute Simple C Programs.

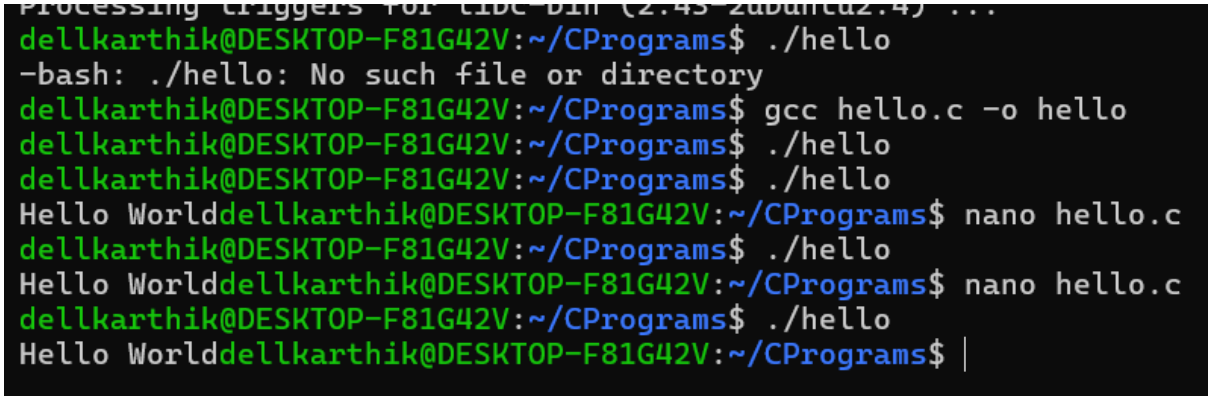

Algorithm :

1. Start the Virtual Machine using VirtualBox or VMware Workstation.
2. Open the Ubuntu terminal.
3. Update the package list using sudo apt update.
4. Install the GCC compiler using sudo apt install gcc.
5. Verify the installation using gcc --version.
6. Create a C program using a text editor.
7. Write the C program and save it with a .c extension.
8. Compile the program using gcc filename.c -o output.
9. Execute the program using ./output.
10. Verify the output displayed in the terminal.

Input:

Output:

Result:

GCC compiler installed successfully, and C programs executed successfully in the virtual machine.
