

CSA1507-Cloud computing and big data analytics

Experiment-5

Aim: Create a simple cloud software application for Mark Sheet Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as name of the student, Reg no of the student , Subjects , Marks, Average, percentage, rank, overall performance etc.

Procedure:

1. Choose a cloud provider such as AWS, Google Cloud, or Microsoft Azure.
2. Create a cloud application for the Mark Sheet Processing System.
3. Create a student database with fields: Name, Register No., Subjects, and Marks.
4. Enter marks for each subject through a simple web form.
5. Calculate total marks automatically for all subjects.
6. Calculate average and percentage using the entered marks.
7. Calculate rank by comparing students' percentages.
8. Display overall performance such as Excellent, Good, Average, or Poor.
9. Store the mark sheets in the cloud database so they can be accessed online.
10. Deploy and test the application on the cloud, allowing teachers/students to access it through a web browser.

Output:

	Name	Register number	mark1	mark2	mark3	Total	Formula	Average
	karthik Reddy	12364479	78	97	96	271	true	90

The screenshot displays the Mark Sheet Processing System web application. The interface includes a sidebar with navigation options: 'Addition', 'Additions', 'Addition', and 'All Additions'. The main content area shows a table titled 'All Additions' with columns for 'Name', 'Register number', and 'mark'. A modal window is open, displaying details for a student named 'karthik Reddy' with register number '12364479'. The modal contains a table of marks for 'mark1', 'mark2', and 'mark3', along with calculated 'Total' (271), 'Average' (90), and 'Formula' (true and false).

Name	Register number	mark1	mark2	mark3	Total	Average	Formula
karthik Reddy	12364479	78	97	96	271	90	true
							false

Result:

The Mark Sheet Processing System was successfully developed as a simple cloud-based SaaS application. It accepts student details and marks, and automatically calculates Total, Average, Percentage, Rank, and Overall Performance. The application can be accessed through a web browser and student records can be stored and managed in the cloud.
