

CSA1507-Cloud computing and big data analytics

Experiment-6

Aim: Create a simple cloud software application for Payroll Processing System using any Cloud Service Provider to demonstrate SaaS include the necessary fields such as Name of the employee, experience in present org , over all experience, basic pay, HRA, DA, TA, net pay, gross pay etc.

Procedure:

1. Choose a cloud provider such as AWS, Google Cloud, or Microsoft Azure.
2. Create a cloud-based Payroll Processing application.
3. Create an employee database with Name, Employee ID, and Experience.
4. Enter salary details such as Basic Pay, HRA, DA, and TA.
5. Calculate HRA, DA, and TA automatically based on the basic pay.
6. Calculate Gross Pay by adding Basic Pay, HRA, DA, and TA.
7. Calculate deductions such as PF, tax, or other applicable deductions.
8. Calculate Net Pay after subtracting deductions from Gross Pay.
9. Store employee payroll records securely in the cloud database.
10. Deploy and test the application so employees/admin can access payroll details online.

Output:

The screenshot displays a web application interface for a Payroll Processing System. The main content area shows a 'Payroll Processing Report' for the employee 'KARTHIK REDDY' with Employee ID '123654'. The report details the following components:

Employee Name	KARTHIK REDDY
Employee ID	123654
Basic pay	10000
DA	1200
HRA	1000
CCA	800
PF	1200
IT	600
LOP	0
Gross Pay	13000
Net salary	11200

Below the table, there is a link to 'Add a comment'. The interface also includes a sidebar with navigation options and a top bar with user information and application status.

Result:

The Payroll Processing System was successfully developed as a simple cloud-based SaaS application. It stores employee details and automatically calculates HRA, DA, TA, Gross Pay, deductions, and Net Pay. The payroll records are securely stored in the cloud and can be accessed online by authorized users.
